DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a) because they fail to show:
 - a. Fig. 6, element 3, as on Pg. 11, line 17
 - b. Fig. 6, element 4, as on Pg. 11, line 18, as described in the specification.

Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

2. The disclosure is objected to because of the following informalities:

a. Pg. 1, line 8, applicant uses the phrase "Timing circuits are used for a numerous clocking applications, particular". Examiner suggests using "Timing circuits are used for numerous clocking applications, particularly" for clarification purposes.

b. Pg. 2, line 16, examiner suggests applicant delete the second instance of "quantization".

c. Pg. 4, line 8, examiner suggests applicant re-write this line for clarification purposes.

d. Pg. 4, line 18, applicant uses the phrase "extra demands, which has a direct". Examiner suggests applicant use "extra demands, which have a direct" for clarification purposes.

e. Pg. 5, line 5, applicant uses "crcuits". Examiner suggests "circuits" for clarification purposes.

f. Pg. 7, line 12, applicant uses "Figure 6shows". Examiner suggests using "Figure 6 shows" for clarification purposes.

Appropriate correction is required.

3. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Kardontchik et al. (US Patent 5,566,204).

(1) With regard to claim 1, Kardontchik et al. discloses in (Fig. 1) a timing circuit for generating clock signals, comprising: an acquisition digital phase locked loop with a wide capture range for closely following an input signal and with its associated disturbances; and an output digital phase locked loop having a slow response relative to said acquisition phase locked loop, said output digital phase locked loop tracking a digital output of said acquisition phase locked loop to generate an output signal for the timing circuit (col. 1, lines 61-67, col. 2, lines 1-8, col. 3, lines 39-45, col. 4, lines 17-25, 61-64, col. 7, lines 1-10).

(2) With regard to claim 11, claim 11 inherits all the limitations of claim 1. Kardontchik et al. further discloses a method of generating clock signals from an input signal subject to errors (col. 4, lines 17-25).

Allowable Subject Matter

4. Claims 2-10, 12-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made record of and not relied upon is considered pertinent to applicant's disclosure:

a. Scordo US Patent 4,633,193 (cited by applicant) discloses clock circuit synchronizer using a frequency synthesizer controlled by a frequency estimator.

b. Hongu et al. US Patent 4156255 discloses a television receiver with synchronous detection and automatic fine tuning.
